

Team Charter

EchoSpot | Team Watermelon

Course	DECO3500 Social & Mobile Computing
Project title	EchoSpot
Team name	Watermelon
GitHub repository	https://github.com/XiruWen/DECO3500_group_watermelon.git

Team leader & Main communication contact: Yiqin Cai (Rach)

1. Team Members

Yiqin Cai (Rach)

Program of study: Master of Interaction Design

Email: yiqin.cai@student.uq.edu.au

Personal aims and goals: My goal is to grow both my technical and teamwork skills through the visual design and interaction programming in this project. I want to build a project that can actually works in daily life and responds to real interaction efficiently. Although programming isn't my strength, I took some courses in undergrad, so I want to develop skills in this course, making the interface genuinely dynamic and interactive rather than static. I also want to express and communicate my design decisions clearly to teammates and users, so I will also personally describe all the things I have done in the report.

Assigned duties: I'll serve as a progress supervisor and the main point of contact for communication on behalf of the team. I prefer coordinating through structured, written channels over relying on lots of unscripted conversation, so I'll use that approach to keep our collaboration and project on track. I'll also develop the front-end and core interaction logic, lead the UI design from sketches to final interface, and document my work in reports.

Lingjie Ruan (Jay)

Program of study: Master of Interaction Design

Email: lingjie.uan@student.uq.edu.au

Personal aims and goals: My goal for this project is to improve my teamwork and communication skills. I also want to learn more about interaction design, user research, and testing, instead of only focusing on programming. I hope I can try some new tasks, learn from my team members, and help the team create a useful and interesting project.

Assigned duties: My main duties are helping with programming and prototype development. I will also take part in idea development, user research, testing, and collecting feedback. I will help with project documents and presentation work, and work with the team to improve the design during the project.

Xiru Wen (Lily)

Program of study: Master of Interaction Design

Email: xiru.wen@student.uq.edu.au

Personal aims and goals: I want to develop my ability to let research and user feedback genuinely reshape a design, rather than relying only on my own instincts. I hope to contribute my experience in interaction design and independent prototyping (Python, Unity), while taking on new responsibilities such as leading user interviews and field research, something outside my usual solo, concept-first workflow.

Assigned duties: Lead user research and stakeholder interviews; define the domain statement and refine the design concept; draft interview questions and synthesise research findings.

Jie Wen (Cho)

Program of study: Master of Interaction Design

Email: j.wen5@student.uq.edu.au

Personal aims and goals: Through this project, I hope to develop my practical skills in interaction design and gain more experience in turning research insights into workable design solutions. I also want to improve my prototyping and user-testing abilities, while exploring how music, location and social interaction can be combined to create an engaging user experience.

Assigned duties: Take part in user research and idea development; assist with interface and interaction design; build and refine prototypes based on testing feedback; and record key design decisions and project progress.

Chuxin Zhang (Cristina)

Program of study: Master of Interaction Design

Email: s4896922@student.uq.edu.au

Personal aims and goals: My goal for this project is to strengthen my ability to translate user research and social and mobile computing concepts into a coherent multimedia interaction. I want to improve my skills in prototyping location-aware experiences and evaluating whether audio, place and asynchronous interaction can support meaningful social connection.

Assigned duties: Support research synthesis and concept evaluation; contribute to the audio-visual interaction flow and mobile prototype; help test the core location-triggered experience; document design decisions, research methods and evaluation outcomes.

2. Communication Plan

Daily communication: Wechat, expected response in 24 hours.

Weekly meeting: In class, online meeting every Friday night.

Backup channels: GitHub, Tencent sharing document in Wechat, Google document

Decision Making: Inclass, in person

GitHub Management: GitHub repository, Push Request

3. Conflict Resolution Plan

For our team, conflicts may arise due to someone not replying in time, delays in work, failure to meet the agreed standards for work results, or absence from meetings without prior notice. Additionally, there may also be situations where two members cannot reach an agreement and result in a stop of the project schedule.

At the beginning, if someone in the team notices a problem, they should communicate directly with that person or tell the team leader through private message. This way, privacy can be maintained and no one will feel embarrassed or pressured. They need to explain the problem and give the other person the opportunity to solve it or express their views.

If the problem remains unresolved after a private communication, we will bring it up at the next team meeting so that everyone can discuss the solution together. We will then clearly define the next steps and ensure that everyone is clear about the following tasks to be completed and the deadlines. And we will also do our best to achieve a result that satisfies all team members.

If the problem still cannot be solved later, we will decide as a team whether to seek help from the course supervisor. When we fail to solve the problem by ourselves, we will directly contact the staff.
