How it works

A sound, left in *one place*

Anyone can see it on the map. It plays only for someone standing within fifty metres of it.

1. Someone leaves a sound here
2. Days pass. Nobody meets.
3. You arrive. Inside 50 m, it plays.

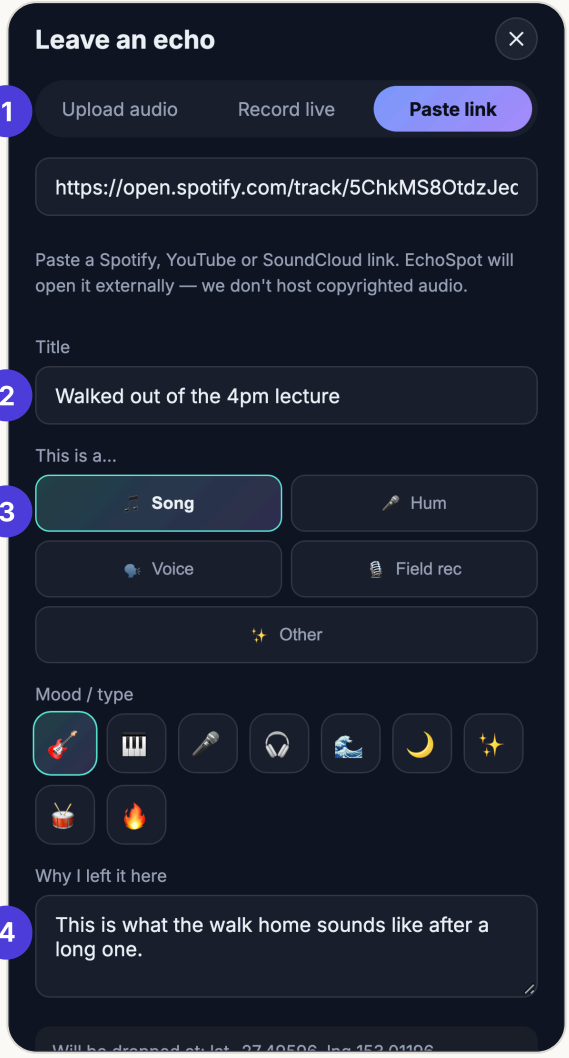

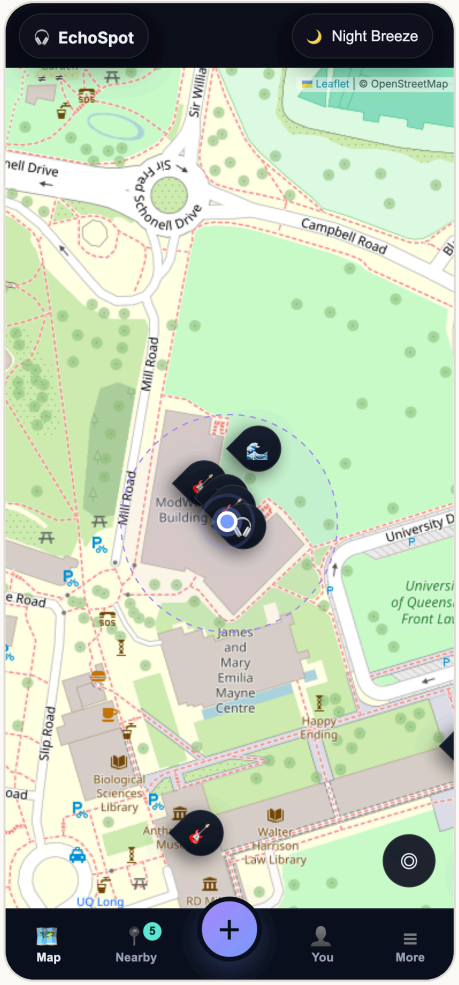

1

Leave

Tap +, and put a sound where you are standing.

1. Record it, paste a link, or upload a file
2. Name it
3. Say what kind of audio it is
4. One line: why here?

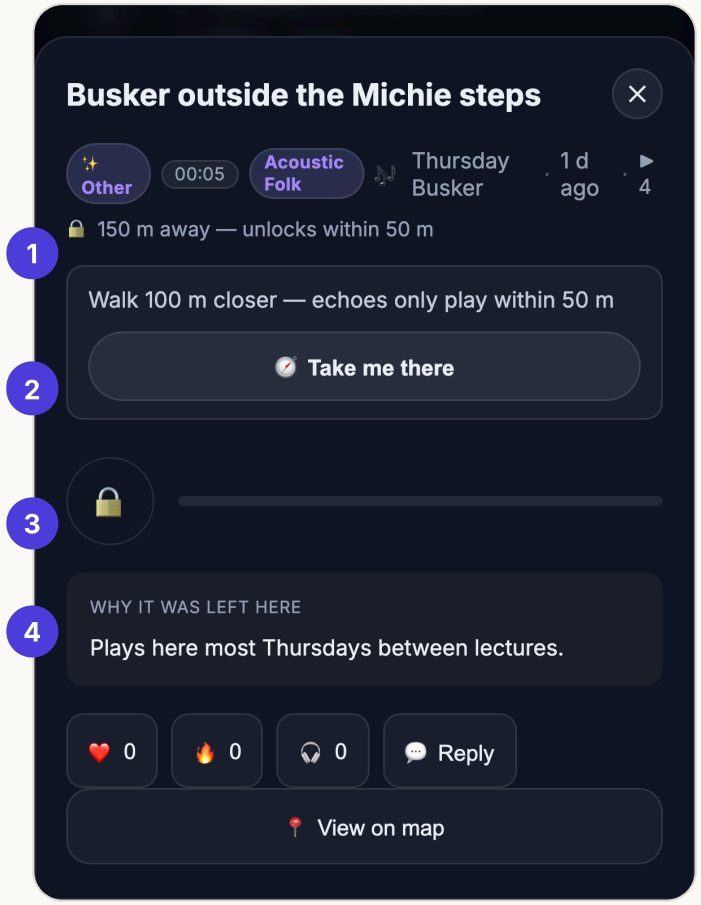

Dropped. It now sits on the map for whoever comes here next.

2

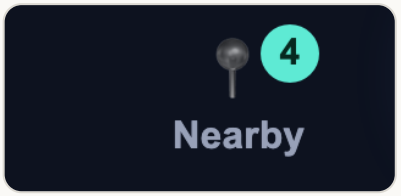

Walk there

Too far, and it stays locked. No preview, no shortcut.

1. How far is left
2. Directions, if you want them
3. The play button is locked
4. Why someone left it

150 m away · locked

How many you can hear from where you stand

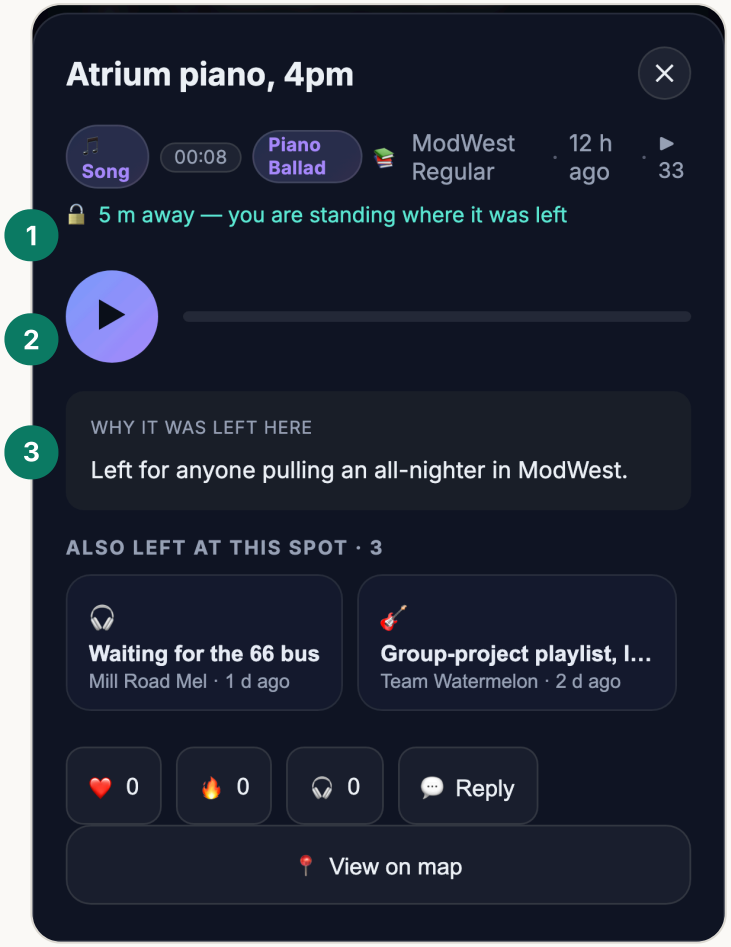

Back to me

3

Listen *here*

Inside fifty metres the line turns green and the sound opens up.

1. You are standing where it was left
2. Press play
3. The reason it is here

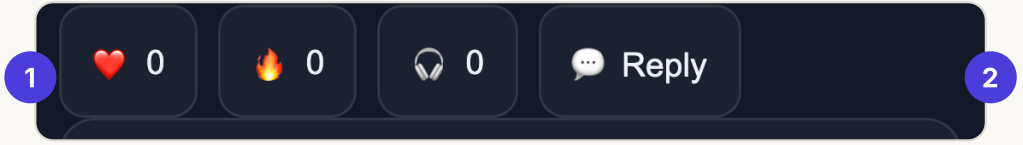

5 m away · unlocked

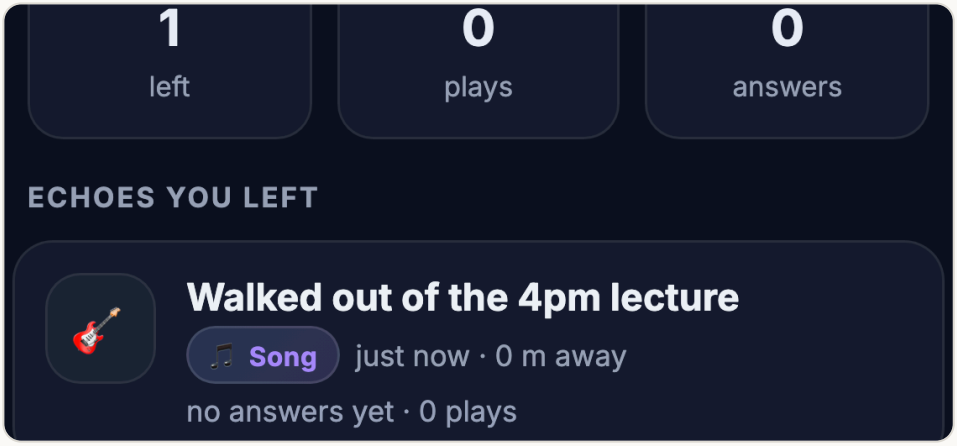

Answer *lightly*

No profiles. No followers. No direct messages.

1. One tap
2. Or one short line
3. Or leave your own, right here

A heart, a flame, a pair of headphones — or a short reply

Whoever left it sees the plays, and what came back

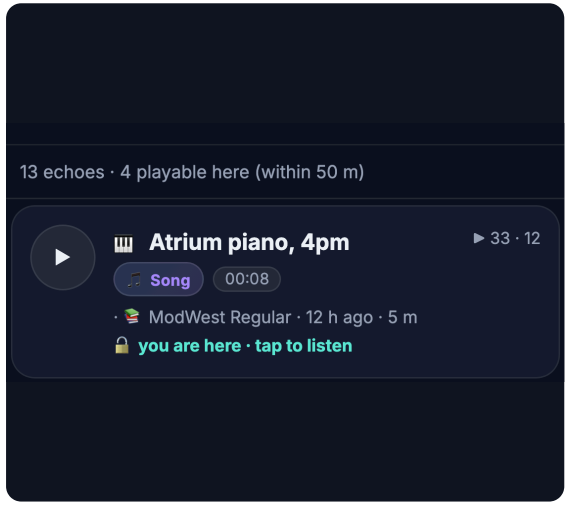

The place keeps *a memory*

Every echo shows what else was left within sixty metres of it. The thread belongs to the place, not to a person.

1. Others who stood here
2. Tap to open theirs

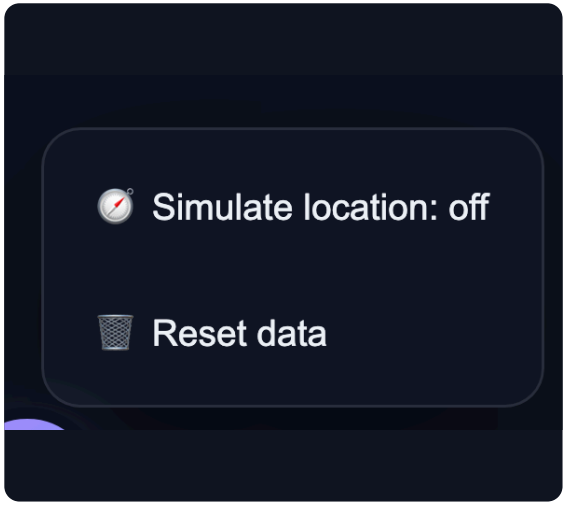

No profiles to follow, and no map of where anybody has been

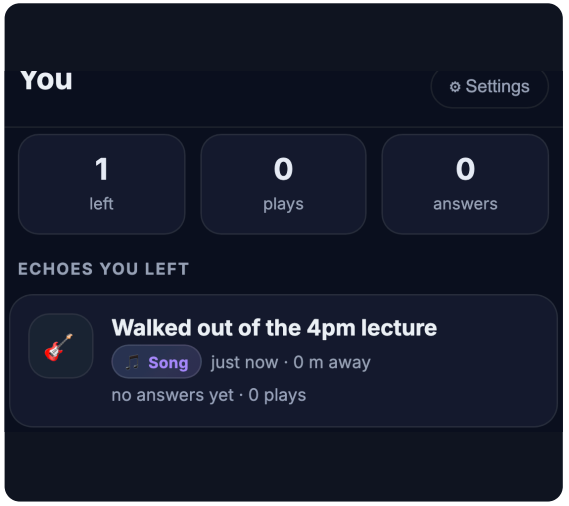

Nearby

Every echo, closest first. Each row says whether you can hear it from where you stand.

Can't get a fix?

More → Simulate location, then tap the map to stand anywhere. Useful indoors.

You

What you left, how often it was played, and what came back.
